

**IN THE CLAIMS**

1-29. (cancelled)

30. (currently amended) An information processing method, comprising:

obtaining, at a first information processing apparatus,  
content data to be broadcast by digital broadcast transmission, the  
content data including at least one of video content data or audio  
content data;

generating discount charge data specifying a charge for  
use of the content data, if the use of the content data at a second  
information apparatus will be discounted, the use including at  
least one of reproducing or copying the content data, wherein the  
charge decreases with a number of times the content data is used;

inserting the discount charge data into a control message  
~~if the charge decreases with a number of times the content data is  
used;~~

multiplexing the content data with the control message by  
~~a~~ the first information processing apparatus to produce multiplexed  
data and transmitting the multiplexed data via the digital  
broadcast transmission;

receiving and demultiplexing the multiplexed data by ~~a~~  
the second information processing apparatus to receive the control  
message and the content data;

recording the received content data onto a recording  
medium by the second information processing apparatus;

using the recorded content data at the second information  
processing apparatus; and

charging for the use of the content data at the second  
information processing apparatus in accordance with the received

~~discount charge data, wherein, if the received control message includes the discount charge data, then the charge decreases with the number of times the content data is used, and wherein, if the received control message does not include the discount charge data, then the charge does not decrease with the number of times the content data is used.~~

31. (cancelled)

32. (previously presented) The method as claimed in claim 30, wherein the discount charge data specifies a charging value which is to be divided by a number  $n$  when the content data is used an  $n$ th time.

33. (cancelled)

34. (previously presented) The method as claimed in claim 30, further comprising encoding the content data, wherein the control message includes an entitlement control message (ECM) and the step of multiplexing the content data includes multiplexing the encoded content data with the ECM via an MPEG2 (Motion Picture Experts Group 2) transport stream.

35. (previously presented) The method as claimed in claim 34, wherein the step of multiplexing the content data includes multiplexing the encoded content data in a carousel manner, and inserting at least a portion of the information of the control message into an adaptation header of a DII (Download Info Indication) packet of the digital broadcast transmission.

36. (previously presented) The method as claimed in claim 34, wherein the step of multiplexing the content data includes multiplexing the content data in a carousel manner and inserting at least a portion of the information of the control message into an expire descriptor of a DII (Download Info Indication) packet of the digital broadcast transmission.

37-40. (cancelled)

41. (currently amended) An information processing apparatus, comprising:

a receiver operable to receive a digital broadcast transmission and demultiplex the received transmission into content data and ~~if included in the received transmission,~~ discount charge data specifying a charge for use of the content data, the use including at least one of reproducing or copying the content data~~;~~ and

a data recording and reproducing device coupled to the receiver, operable to record the content data onto a recording medium and to reproduce the recorded content data,

wherein the recording and reproducing device is operable to charge for use of the content data at the second information processing apparatus in accordance with the received discount charge data, ~~wherein, if the received transmission includes the discount charge data, then the charge decreases~~ decreasing with the number of times the content data is used, ~~and wherein, if the received transmission does not include the discount charge data, then the charge does not decrease with the number of times the content data is used.~~

42. (previously presented) The information processing apparatus as claimed in claim 41, wherein the discount charge data specifies a discount charge to be charged for at least one of reproducing or copying the content data an nth time by the information processing apparatus.

43-59. (cancelled)

60. (previously presented) The method as claimed in claim 32, wherein the discount charge data specifies a charge which varies inversely with the number of times the content data is used.

61. (currently amended) An information processing method, comprising:

receiving a digital broadcast transmission;

demultiplexing the received transmission into content data, ~~and if included in the received transmission, discount charge data specifying a charge for use of the content data, the use including at least one of reproducing or copying the content data, wherein the charge decreases with a number of times the content data is used;~~

recording the content data onto a recording medium; and

charging for use of the recorded content data in accordance with the received discount charge data, wherein, if the received transmission includes the discount charge data, then the charge decreases decreasing with the number of times the content data is used, and wherein, if the received transmission does not include the discount charge data, then the charge does not decrease with the number of times the content data is used.

62. (previously presented) The method as claimed in claim 61, wherein the discount charge data specifies a charge which varies inversely with the number of times the content data is used.

63. (currently amended) A computer-readable recording medium having instructions recorded thereon, the instructions being executable by an information processing apparatus to perform a method, the method comprising:

receiving a digital broadcast transmission;

demultiplexing the received transmission into content data, ~~and if included in the received transmission, discount charge data specifying a charge for use of the content data, use including at least one of reproducing or copying the content data, wherein the charge decreases with a number of times the content data is used;~~

recording the content data onto a recording medium; and

charging for use of the recorded content data in accordance with the received discount charge data, ~~wherein, if the received transmission includes the discount charge data, then the charge decreases decreasing with the number of times the content data is used, and wherein, if the received transmission does not include the discount charge data, then the charge does not decrease with the number of times the content data is used.~~

64. (previously presented) The recording medium as claimed in claim 63, wherein the discount charge data specifies a charge which varies inversely with the number of times the content data is used.
